

Role: IT Systems Engineer

Digital Gaming Corporation is looking for passionate **IT Engineers** to help support our platform, delivering the content of choice for casino operators and their players. You will be working in a small but high performing IT team to create something special.

Our casino platform is designed for fast and efficient deployments and seamless integration into a high performing library of online casino games. You will need to assist with the hosting, management and updating of this technology to ensure our success.

A talented trouble-shooter, it'll be your job to work with our customers to fix problems and provide solutions across a vast array of technologies. The team will deliver unparalleled tech support and customer service to a growing customer database.

If you are an outgoing and enthusiastic problem-solver with a passion for IT, this could be what you have been looking for.

Key Skills & Responsibilities include:

- Significant Industry experience
- Experience in on boarding new customers
- Ensure all Production and Staging environments are effectively monitored.
- Ensure seamless on boarding of new customers
- Ownership of technical projects by providing technical expertise, implementing efficient solutions, ensuring minimal risk and communicating all required information and key milestones to relevant stakeholders.
- Plan software releases and configuration processes to ensure minimal risk and product downtime.

Ideally, you will have experience using:

Windows Server | SQL Server | IIS Web Server | F5 Load Balancers | XML & JSON based APIs

If you know anything at all about programming languages, great that will stand you in good stead! We use these ones:

PowerShell | C# | .NET | Node / Vue JS

And any knowledge of these would be a bonus:

Grafana | ELK Stack (Elasticsearch / Logstash / Kibana) | Metricly | App Insights | SCOM

We're here to grow and nurture our team we'll provide training and development opportunities to help you up your game.
